

What is a SQL Statement and types of SQL statements

SQL statements defined...

- SQL (pronounced "ess-que-el") stands for Structured Query Language
- SQL is used to communicate with a database.
- According to ANSI (American National Standards Institute), it is the standard language for relational database management systems.
- SQL statements are used to perform tasks such as update data on a database, or retrieve data from a database.
- Most RDBMS use SQL .
- Most of them also have their own additional proprietary extensions that are usually only used on their system.
- However, the standard SQL commands such as "Select", "Insert", "Update", "Delete", "Create", and "Drop" can be used to accomplish almost everything that one needs to do with a database.

SQL statements examples...

```
USE AdventureWorks;  
SELECT * FROM Sales.SalesOrderHeader  
WHERE [OrderDate] BETWEEN '1/1/2021' AND '4/31/2021'
```

```
USE AdventureWorks;  
update Sales.SalesOrderHeader set OrderDate = getdate()  
WHERE [OrderDate] = '1/1/2021'
```

```
USE AdventureWorks;  
drop table Sales.SalesOrderHeader
```

Types of SQL Statements...

- DML (DATA MANIPULATION LANGUAGE)
- DDL (DATA DEFINITION LANGUAGE)
- DCL (DATA CONTROL LANGUAGE)
- TCL (TRANSACTION CONTROL LANGUAGE)
